

# Your Trusted Advisor for Cybersecurity Risk Management

## We Are A Virtual CISO

Cybersecurity has become one of the critical issues that all organizations across all industries must address. Leading this effort for organizations is the responsibility of the chief information security officer (CISO).

The role of CISO has been a mainstay at large organizations for a couple of decades. For small and mid-sized businesses, the functional role of CISO has become a critical gap in their overall security and risk management programs.

For the SMB, this is the realm of fractional or virtual CISO (vCISO). Harbor provides vCISO services that not only have depth and breadth of knowledge about the threat landscape, tools, and techniques to protect systems and data, but also a unique perspective on how to analyze and mitigate risk appropriately for your business.

## Experienced

Our job, as your vCISO, is to provide cybersecurity expertise and guidance to your company – that adapts to your changing needs. We have an established network that can act as an extended resource for you and your team.

## Flexible

All of Harbor's services are fully integrated, so they work together to provide a seamless cybersecurity program.

## Cost Effective

vCISOs are always available to help whether on-site or off-site. Retaining a vCISO is essentially a flexible relationship with little risk.

# Our Company At a Glance

## Harbor's role is one of enabling business

We are proactive rather than reactive and we strive to help our clients develop the cybersecurity program necessary to take their organization to the next level. Our innovative processes are based on industry-standard frameworks that are tailored to meet the needs of SMBs.

### Services

Our services are designed to meet the cybersecurity needs of small and medium businesses. We offer a range of services from cyber risk advisory to vCISO consulting to meet specific security requirements without putting a strain on your IT budget.

Harbor provides our clients with a comprehensive set of consultative services that allow businesses to make informed, fact-based decisions and manage cyber risk. Ultimately protecting the things that are most important to you.

Our innovative processes are based on industry standard frameworks which are then tailored to meet the needs of the SMB.

### Leadership

Harbor Technology Group was founded by networking and security veterans to address cybersecurity threats not just for the Fortune 100 companies but, for small to medium sized businesses as well.

We specialize in providing enterprise grade services that are affordable enough to meet the budgetary restrictions of growing organizations, and forward-thinking enough to provide advanced protection as those businesses evolve.
